

INTERACTIVE WEB EXPERIENCE

Project Overview

Naruto-themed interactive web portal allowing fans to explore characters, jutsu abilities, memorable battles, character quizzes, and animations.

- Problem Statement:**
- Generic fandom wiki pages lack interactive, visually engaging experiences and immersive lore exploration.
- Solution Implemented:**
- Created a rich interactive client-side web application featuring character modals, audio FX, and trivia games.
- My Technical Role:**
- Frontend Experience Architect

Main Features & Technical Stack

- Core Features:**
 - Interactive character cards with jutsu & backstory modals
 - Dynamic trivia quiz with real-time score tracking
 - Parallax scrolling animations and sound effects
- Technologies Used:**

HTML5, CSS3, JavaScript ES6+, GitHub Pages
- Architecture Flow:**

Browser Client → DOM Event Engine → Local Storage → GitHub Pages Host

Technical Challenge & Results

- Key Engineering Challenge:** Hardware-accelerated CSS transforms to preserve 60fps animations on mobile screens.
- Validated Results:** Engaged hundreds of anime fans with interactive web experiences.
