

MEDIA STREAMING PLATFORM

Project Overview

Subscription-based video streaming platform supporting user authentication, video playback, content uploads, and administrative video management.

Problem Statement:	Building lightweight video streaming portals requires low-overhead video delivery and subscription access control.
Solution Implemented:	Developed a Node.js & MySQL media streaming platform with user roles and dynamic video streaming.
My Technical Role:	Full-Stack Web Developer

Main Features & Technical Stack

Core Features:

- User account registration & subscription management
- Optimized video player with smooth playback
- Admin dashboard for video uploading & content taxonomy

Technologies Used:

HTML, CSS, JavaScript, Node.js, Express, MySQL, Vercel

Architecture Flow:

Web Client → Node.js Server → MySQL DB → Media Storage → Vercel CDN

Technical Challenge & Results

Key Engineering Challenge: Implemented video chunking to ensure smooth playback on slower mobile connections.

Validated Results: Delivered a fully responsive media streaming portal.
