REAL-TIME API WEB APPLICATION

Project Overview

Real-time weather forecast application displaying live temperature, humidity, wind speeds, and meteorological conditions for global cities.

- Problem Statement:**
- Users require instant, clean, reliable weather forecasting without invasive advertisements.
- Solution Implemented:**
- Built a responsive glassmorphism web application consuming OpenWeatherMap REST APIs.
- My Technical Role:**
- Frontend Developer

Main Features & Technical Stack

- Core Features:**
 - Instant city search with auto-complete and error handling
 - Live temperature, humidity, wind speed, and pressure metrics
 - Dynamic background visuals matching current weather conditions
 - Fully responsive glassmorphism UI layout
- Technologies Used:**

HTML5, CSS3, JavaScript ES6, OpenWeatherMap API, GitHub Pages
- Architecture Flow:**

Search UI → Fetch Layer → OpenWeatherMap API → Dynamic DOM Render → GitHub Pages

Technical Challenge & Results

- Key Engineering Challenge:**
- Handled 404 API responses gracefully with user-friendly toast alerts.
- Validated Results:**
- Delivered a sleek weather dashboard with sub-second response times.
